

ABSTRACT OF THE DISCLOSURE

A cover for connecting sockets of a storage container for liquids has a plastic cover body divided into first and second cover parts. The first cover part is attached to the container top and has a first end face opening surrounded by an opening rim. The second cover part is pivotably connected to the first cover part and has a closure rim resting in the closed position on the rim of the top. The second cover part has a second end face opening and a cover rim surrounding it. The cover rim extends in a plane slanted relative to the closure rim of the second cover part. The cover rim covers in the closed position the opening rim of the end face opening of the first cover part. When open, the second cover part surrounds the first cover part with clearance and is supported on the first cover part.
